Data interpretation

The information contained in this report is provided for informational, planning, and system-evaluation purposes and is based on available dispatch, response, operational, and disposition data. Individual data elements, including call classification, resources requested or assigned, agency response, level of care, transport level, and final disposition, represent separate components of an EMS incident and should be interpreted within the context of the overall response and circumstances of the incident. No single data element should be interpreted independently as a definitive determination of patient condition, clinical need, required level of care, resource necessity, or the appropriateness of a particular response or disposition.

Summary measure	Result	
Incidents in response dataset		332
Average incidents per month		41.5
Dispatched as ALS	170	51%
Dispatched as BLS	162	49%
Average dispatch-to-scene time		12:12:23 AM
Median dispatch-to-scene time		12:11:39 AM

Response times measure dispatch to scene, not receipt of the 911 call. Calculations include 310 incidents with usable timestamps; 22 are excluded.
