

SEWER AGENDA:
THURSDAY, AUGUST 8 4PM
TOWN HALL

1. Sewer Inspection Report (See attached)
 - a. Fabrics
 - b. I&I – inflow (pumping of unauthorized water) and infiltration (rain events).
DEC has pointed out that we have high peak and looks like we approaching daily limit. However, the flow meter showed a higher flow than what it actually was when recalibrated. It has been corrected. Still will show peak flows. Leslie disagrees with calculations on flow charts. Week’s work worth of data may be incorrect.
 - c. DEC will want us to perform and I&I Study. Our Town Engineer could possibly handle. Plus side is that the pump stations will be pumped. Someone will need to be available for camera work and flow meter installation. All the pipes and conduits will need to be inspected.
2. Sewer Connection Fee – Les was asked for advice – Les is suggesting putting money in escrow also. The Committee discussed and came up with the following proposal:

\$1000 Base fee to join

\$2000 Escrow – but if costs exceed it will be responsibility of owner.

3. \$125K CREST GRANT
 - a. DEC Input – I&I will be key
