Re: Annual Backflow Preventer Device Testing

Dear Ogden Dunes Residents:

Each year, Ogden Dunes Waterworks is mandated by the Indiana Department of Environmental Management (IDEM) to insure that all documented backflow prevention devices installed in Town have an annual certified inspection conducted to protect our potable drinking water and its' transmission system.

If you've had your backflow device tested previously, please continue to do so for the upcoming 2025 season. If you have an outdoor irrigation system that does not have a backflow device, one must be installed and tested annually. If you have any questions regarding the need of this device, please feel free to contact our office. For a list of approved IDEM and Ogden Dunes licensed backflow testing companies, please visit our website for the approved testers. All devices must be inspected / tested no later than July 1, 2025. All test / inspection reports will be sent to the Ogden Dunes Waterworks office by your 'testing contractor'. Please be sure to keep a copy for your records.

Please do not to neglect this task. Failure to comply with the IDEM mandate could result in the loss of water services to your residence.

When you speak with a contractor, be sure to verify that this contractor is both IDEM and Town of Ogden Dunes licensed to perform this testing requirement. If not, the contractors test report will not be accepted by the Waterworks Department.

If you have any questions, please contact the Waterworks Department at 219-762-2441 or the website at water.works@ogdendunes.in.gov.

Yours truly

Ogden Dunes Water Board.
