

PUBLIC WORKS MONTHLY REPORT

The PFAS Treatment Plant project will start in July

The sewer vac truck is still broke down; we are waiting for some parts for the hydraulic ram. They can't fix the ABS brake system at this time. They can't get the wiring harness apart. If they break the plug or the computer trying to get it apart there's no guarantee they can get the parts to fix it because it's over 25 years old and Sterling is out of business. They may have to look in junkyards for parts.

We have started replacing manhole castings on N First St.

We are in the process of pumping sludge from the polishing pond to pond two for storage.

This year's sidewalk project will be starting in the next week or two. We need to coordinate with the homeowners that are having the sidewalk through their driveways done.

I'm in the process of interviewing people for the part time grass cutting.
